

The Mixed Up Chameleon

By Eric Carle

The Mixed Up Chameleon Knowledge Organiser

Things I need to know:

- Chameleons are a type of lizard.
- They are mostly found in Madagascar, Africa.
- Chameleons change colour based on their mood, light and temperature.
- Chameleons live in trees and can grip onto them with their toes and tails.
- Chameleons lay eggs.

Vocab:

carnivore- an animal that eats meat

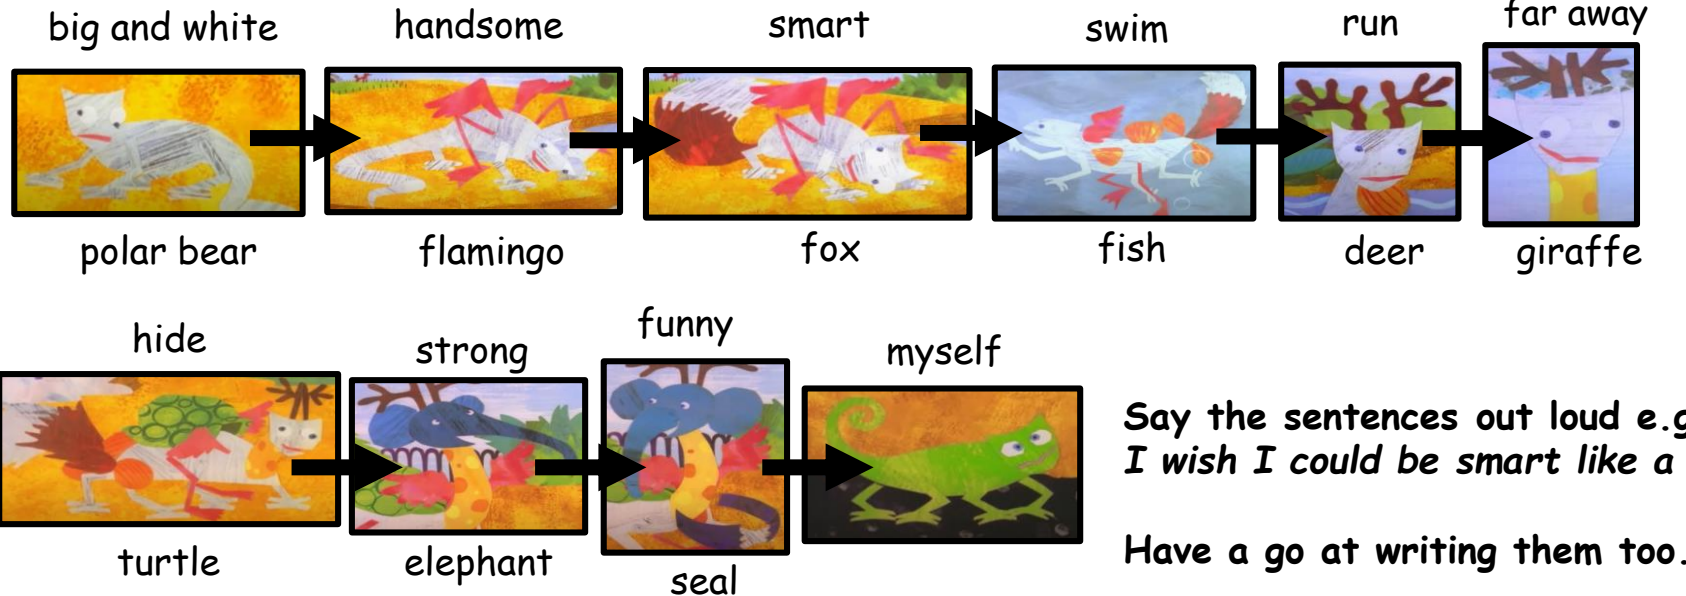

diagram- a picture with labels

habitat- the natural home of an animal

hybrid- a thing made by combining two different things e.g. electric bicycle

skills- something that makes someone or something special e.g. being strong

I can remember the story language: *I wish I could be/could... like a ...*

Say the sentences out loud e.g.
I wish I could be smart like a fox.

Have a go at writing them too.
